## Why choose the investment policy

Due to various expectations on returns and risk acceptable level, each provident fund member should have an opportunity to choose and adjust the investment policies according to each member's change in age and risk acceptable level to create a chance of growth in provident fund proceeds which shall be sufficient to support the member's living after retirement.

The factors that must be considered when choosing the investment policy are the investment period, risk level and returns, monthly savings and sufficient amount of money for the post retirement.

For example, young-age fund member with longer investment period and high risk acceptable level, should have an opportunity to invest in equity policy with a chance to obtain higher return in the long run compared the return from fixed-income policy investment. On the other hand, fund members, who shall reach their retirement age in the near future, should be able to invest in fixed-income policy to match their needs of principal preservation and to minimize the loss from equity price fluctuation.

Therefore, the employee's choice concept allows each member to choose suitable investment policy in relevant to investment period, risk level the expected returns, the ability of savings and the needed money for the post retirement.

## Who is this policy suitable for?

### Suitable for

- Members who seek for investments diversification to foreign securities and can tolerate the risk of foreign stock prices fluctuation which may result in a loss from the investment.
- Members who expect to receive medium to long-term return than that received from fixed income investment.

### Not Suitable for

- Members who emphasize on receiving certain amount of return or focus on principal preservation.

### How to have more understanding of the investment policy and its risk level?

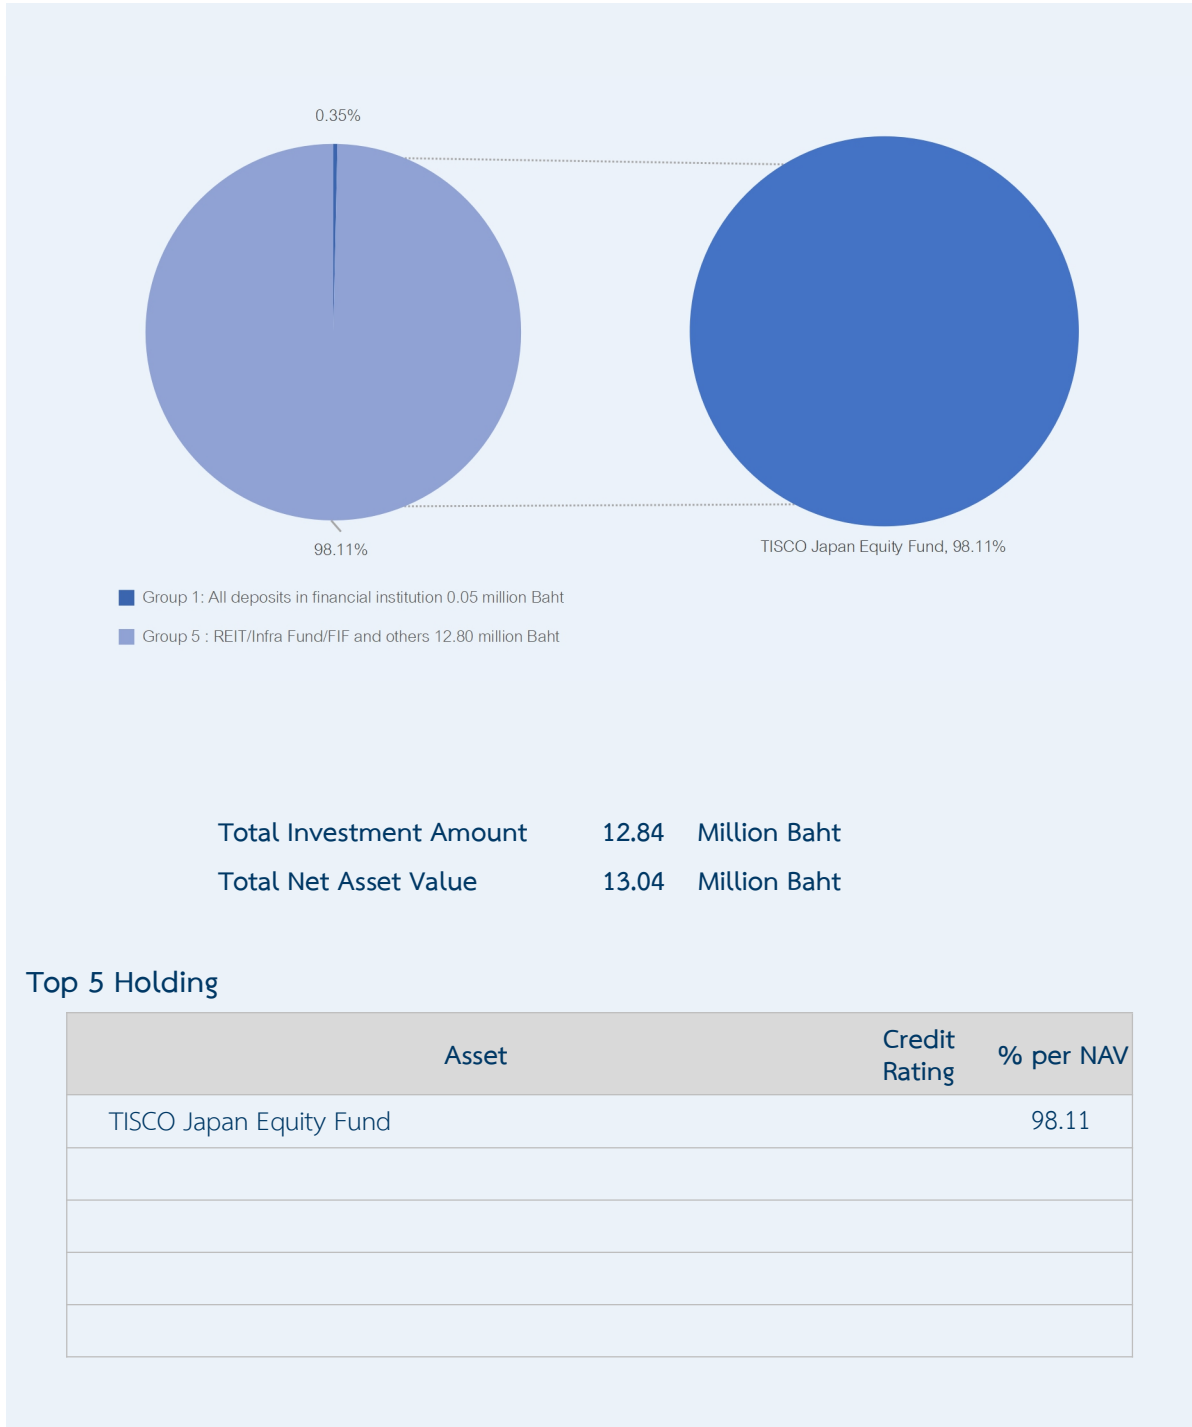

- Seek advice from fund committees

## Additional explanation of risks

- Credit risk is the risk arising from the issuer's inability to repay the principal or interest within the specified time frame.
- Liquidity risk is the risk arising from the fund's inability to sell those instruments at an appropriate price or within the required time frame.
- Market risk is the risk arising from the price of securities or assets invested by the fund being affected by the volatility of various economic factors such as economic conditions, industry conditions, politics, money market conditions and capital markets, liquidity in the money market, adjustment of product price which is a factor in production or war, etc.
- Exchange rate risk is the risk arising from an increase or decrease in the exchange rate of one currency compared to another since the fund invests in investment units of foreign funds that are traded in foreign currencies. This shall cause the returns to be uncertain because the foreign currency that the fund invests in must be exchanged into Baht.
- Country and political risk is the risk arising from the political instability, economy, money market and capital market of various countries which the fund has invested.
- Repatriation risk is the risk that the fund shall not be able to fully bring investment back to the country as expected.
- Leverage risk is the risk from investing in derivatives for hedging and to enhance investment management (Efficient Portfolio Management). The duration and proportion of hedging investment shall depend on the forecast of the future trend of the fund management company which may not be able to prevent all risks as well as the risk that the price of the underlying asset moves against expectations. If the forecast is wrong, this may cause the losing of the opportunity to receive higher returns. In addition, regarding efficient portfolio management, the fund management company shall consider the market conditions at that time, regulations, and other related factors such as stock price direction, interest rate and exchange rate conditions including the cost of investing in futures contracts.
- Business risk is the risk arising from changes in business status or business performance. This shall affect the stock price of that company or business to increase or decrease.
