## Why choose the investment policy

Due to various expectations on returns and risk acceptable level, each provident fund member should have an opportunity to choose and adjust the investment policies according to each member's change in age and risk acceptable level to create a chance of growth in provident fund proceeds which shall be sufficient to support the member's living after retirement.

The factors that must be considered when choosing the investment policy are the investment period, risk level and returns, monthly savings and sufficient amount of money for the post retirement.

For example, young-age fund member with longer investment period and high risk acceptable level, should have an opportunity to invest in equity policy with a chance to obtain higher return in the long run compared the return from fixed-income policy investment. On the other hand, fund members, who shall reach their retirement age in the near future, should be able to invest in fixed-income policy to match their needs of principal preservation and to minimize the loss from equity price fluctuation.

Therefore, the employee's choice concept allows each member to choose suitable investment policy in relevant to investment period, risk level the expected returns, the ability of savings and the needed money for the post retirement.

## Who is this policy suitable for?

### Suitable for

- Members who expect to receive return which is close to return from bank deposits and can accept the return which may be lower than the return from investment in general fixed income policy.
- Members who seek for investment with low to moderate risk level. However, there is a risk of inadequate money for post-retirement living.

### Not Suitable for

- Members who expect to receive high return.

### How to have more understanding of the investment policy and its risk level?

- Seek advice from fund committees
- See additional information via [www.thaipvd.com](http://www.thaipvd.com)
